

## Brinsea Expands Its Line of App-Controlled Incubators with the Maxi 24 EX Connect

Brinsea Products, the Incubation Specialists, are excited to introduce the Maxi 24 EX Connect, the latest addition to their growing range of Wi-Fi-enabled egg incubators. Following the successful launch of the Ovation 56 EX Connect, the Maxi 24 EX Connect offers enhanced monitoring and control features through the Brinsea Connect app, available for both Android and iOS devices.

Designed to incubate up to 24 hen eggs, the Maxi 24 EX Connect allows users to monitor and adjust key incubation settings directly from their smartphones. The Brinsea Connect app brings convenience and peace of mind by enabling remote monitoring of crucial factors such as temperature, humidity, egg turning, cooling, and a countdown to hatch day—all from the palm of your hand.

### Key Features of the Brinsea Connect App:

- **Real-Time Monitoring:** Keep track of temperature, humidity, turning cycles, cooling periods, and the countdown to hatching day.
- **Instant Alerts:** Receive push notifications for any fluctuations in temperature, humidity, or power outages, ensuring you're immediately aware of potential issues.
- **Remote Adjustments:** Easily change settings like temperature, humidity, cooling, and egg turning right from your phone.
- **Future-Proof Technology:** The app is regularly updated, ensuring your incubator remains equipped with the latest features and improvements.

Ian Pearce, Managing Director of Brinsea Products Ltd, emphasized the value of this innovation: *"Remote monitoring of hatching eggs is a significant advancement for our customers. It offers peace of mind, allowing users to ensure their eggs are incubating under ideal conditions without needing to physically check the incubator. The Brinsea Connect app provides instant alerts if any issues arise, so you can take action quickly."*

It's important to note that while remote functionality requires a Wi-Fi connection, the incubator will continue to operate normally even if the internet connection is temporarily lost. There's no risk to your eggs during this time.

The Brinsea Connect app is available for free download from both the Apple Store and Google Play.
